ABOUT NOOSAPEC 2026

The Noosa Power & Energy Conference is a curated executive forum focused on the delivery phase of Australia's energy transition.

As the market shifts from ambition to execution, the primary constraints are no longer technical. They sit in coordination across grid reform, industrial capability, workforce alignment, capital deployment, and regional delivery.

NoosaPEC convenes the senior leaders responsible for delivering this transition. This includes decision-makers across energy systems, infrastructure, manufacturing, capital markets, government, and research.

Speakers are invited based on demonstrated delivery experience and their role in implementing projects that shape Australia's energy and industrial future.

The forum brings together leaders across:

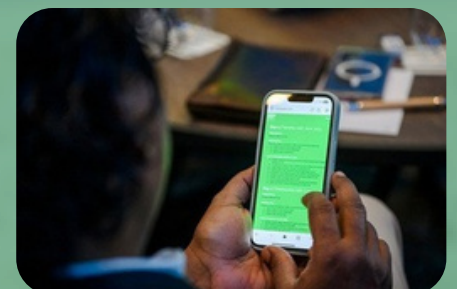

- Energy generation and networks
- Developers and EPCs
- Advanced manufacturing
- Mining and critical minerals
- Large energy users
- Investors and capital providers
- Government and regulatory agencies
- Skills and workforce institutions

Attendance is capped and carefully curated to preserve executive relevance, sector balance, and quality of discussion.

This is not a volume-based conference. It is a structured environment where those responsible for delivery engage directly on implementation challenges, system constraints, and coordination across sectors.

Many of the projects represented are long-duration, capital-intensive developments that will define regional economic outcomes and national industrial capability over the next decade.

DAY 2: MANUFACTURING ECONOMIC SECURITY

The Future Made in Australia agenda sets a clear ambition: build industrial capability across clean energy, critical minerals and advanced manufacturing.

The opportunity is significant. The challenge is making it commercially viable.

Australia is a high-cost operating environment. Industrial capability will only scale where energy, infrastructure, capital and workforce are aligned in practice.

A forum grounded in commercial reality

Day 2 of NoosaPEC is designed as a real-time pulse check on that alignment. This is not another policy discussion, but rather a working forum bringing together the organisations actively trying to build, invest, hire and deliver.

The discussion focuses on what is happening now:

- Are projects stacking up commercially?
- Where are delays emerging across approvals, infrastructure or financing?
- What is constraining investment, and where can it be unlocked?
- Where are workforce shortages most acute?
- What needs to change now to keep projects viable?

The next phase of the energy transition will determine whether Australia captures long-term industrial value or continues to export raw inputs. A MES partnership positions your brand at the centre of this discussion.

Stakeholders include:

- Regional and local government, including REZ authorities
- Energy Skills Australia and manufacturing skills bodies
- TAFEs, universities, and training institutions
- Government departments and workforce agencies
- Developers and EPCs
- Manufacturers and industrial technology providers
- Mining and critical minerals producers
- Data centres and large commercial and industrial energy users
- Research institutes and think tanks
- Media and industry associations

WHY PARTNER WITH NOOSAPEC

NoosaPEC is structured differently from traditional industry events. It is designed as an executive environment where access, influence, and sector alignment are prioritised over scale.

Partnership positions your organisation within a high-trust forum composed of the leaders responsible for infrastructure deployment, capital allocation, and industrial coordination.

This creates a materially different outcome from standard sponsorship.

Partnership provides:

Executive Access

Direct engagement with senior decision-makers responsible for major projects, investment decisions, and policy direction.

Program Integration

Participation aligned to sector leadership, including speaking roles, moderated sessions, and strategic discussions.

Category Exclusivity

Limited representation within each partnership tier to preserve relevance, positioning, and visibility.

Influence on Delivery Dialogue

Involvement in discussions shaping how energy, manufacturing, and workforce systems are coordinated.

High-Trust Environment

Curated attendance enables deeper, more commercially relevant conversations than open-access events.

NoosaPEC partnership represents alignment with the delivery phase of Australia's clean economy, rather than traditional event sponsorship.

NOOSAPEC PARTNERSHIPS

	Silver	Gold	Principal
Recognition as a sponsor in promotional materials	✓	✓	✓

MANUFACTURING ECONOMIC SECURITY

Energy

Manufacturing

Skills & Workforce

The next phase of the energy transition will determine whether Australia captures long-term industrial value or continues to export raw inputs. With better coordination across energy, manufacturing, government and workforce systems, this opportunity can be realised.

A MES Partnership positions your brand at the centre of this conversation, aligning you with a nationally significant theme linked to Future Made in Australia.

Silver Partner

Investment: \$10,000 + GST

- Logo on branded holding screens
- Branding on digital screens throughout the conference area
- Logo on website and all event promotional materials
